INTRODUCTION TO OUR PROJECT

- Collect game
- Objective
- Language used
- Core feature

GAME MECHANICS

- Core Action
- Movement
- Object Behavior
- Collision Detection
- Scoring
- Game Over

DEVELOPMENT PROCESS

- Brainstorming
- Right tools and libraries
- Structuring the code
- Final testing

CODE BREAKDOWN

- Create game windows and renderer
- Handle user input
- Collision detection
- Game loop
- Cleanup

DEMO

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

#####
#                                     #
#                                     #
#                                     #
#                                     #
#           O   #
#       P       #
#   O O         #
# O             #
#           O   #
#                                     #
#####
Score: 0  Moves Left: 60
Use WASD to move, Q to quit
Enter move: █
```

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

#####
#                                     #
#                                     #
#                                     #
#           O                         #
#                                     #
#                                     #
# O                                     #
#   O                                 #
#     O                             #
#   P           O                   #
#####
Score: 6  Moves Left: 1
Use WASD to move, Q to quit
Enter move: w

Moves exhausted! Final Score: 6
Press Enter to exit...
```

CONCLUSION

- Summary
- What we learned
 - Problem solving in game development
 - Project Impact
- Future scope and Recommendations

THANK YOU
